Now I need to get the data based on the userid. select distinct userid, userName, [locationid] from #tempUsers inner join #tempLocations on #tempUsers.userid = #tempLocations.locationid But I am getting a run-time error saying Column 'testUser1.locationid' is invalid in the select list because it is not contained in either an aggregate function or the GROUP BY clause. Userid should be unique for each row so when I query the table with the above userid, I should be able to get a unique value. How can I fix the 04aeff104c
