ABOVE: A set of illustrations created with Adobe Photoshop CC. **BELOW:** A set of illustrations created with Adobe Photoshop Sketch on the iPad Pro with the Apple Pencil. Adobe Photoshop CC 2018 may not do everything perfect, but it does it really well. And that's exactly why I chose a new Mac desktop computer this winter, so I could finally stop lugging my everyday tool around anyway. In converting to the Mac, I needed a robust, fully featured software package, and I find Photoshop CC to be quite perfect, though it certainly has some rough edges. It works very well with the large number of third party plug-ins. I haven't been disappointed here, either. And it takes care of merging together several versions of the same file, considering that any closed folder of versions can be loaded into the system. That kind of stability is very important to me. And if you wonder about this, I kept *every single* bit of information there was to keep when digitizing and retouching a large photo

book for over a year. You'll find that it can save even really big files. I like the preview of the existing layout of my files. The top-most rows, especially the preview panel, are nearly always removed. They are just too limited. I simply like everything else below it, so that I get a feeling of everything that is there. It has been very easy to make changes. Even with complex compositions, the changes can be rapidly implemented. The responsiveness of the software is very good. It's always nice to select a layer, change an adjustment, or resize a brush and see the effect immediately. As an experienced editor, I can safely say that the learning curve of this program is very short.

When you picture a browser, your very first thought is going to be, "of course, the web," but browsing in the browser is actually pretty inconvenient. Safari is a great browser, and I use it all the time. But I will usually use Chrome instead because I find it the most comfortable to use. Firefox has also been a great browser, and even though its support for the WebAssembly virtual machine is "inferior" in my opinion, the speed is actually very fast. But if I had to pick one for use in general, I would probably choose Chrome. I have to say that it's my favorite browser anyway, and a browser is just a browser. The designers used to experience a lot of problems with the look of pictures they created in Photoshop when they tried to use them in web-pages. Even after the work on the designs was complete, web-pages had to be of HD quality at least. It was impossible to load graphics created in Photoshop into a Web-server to be uploaded to the web, unless the site had a CD-worsk and place to copy all the pictures over. e3d0a04c9c
